

Amendment to the Concrete Control Plans Placement Procedure:

When concrete is placed from a concrete placing boom or tremie pipe attached to a placing boom and swinging over water, either:

- A bag will be placed at the end of the hose or tube to capture potential concrete discharges when over water. The concrete plant boom operator is responsible for confirming that the bag is in place and secured before swinging over water; or
- The hose or tube will be bent and wire tied to kink the hose or tube causing a positive seal. The concrete plant boom operator is responsible for confirming that the hose or tube is kinked with wire tie and secured before swinging over water.
