

TAPPAN ZEE BRIDGE/I-287  
ENVIRONMENTAL REVIEW

## THE TAPPAN ZEE BRIDGE/I-287 ENVIRONMENTAL REVIEW

### BENEFITS

This fact sheet is part of an extensive public outreach program that is at the center of a regional study to improve mobility within the I-287 Corridor, between Suffern and Port Chester, and to address structural issues related to the Tappan Zee Bridge. The study is being conducted by the New York State Department of Transportation, the New York State Thruway Authority and MTA Metro-North Railroad under the supervision of the Federal Highway Administration and the Federal Transit Administration, the federal co-leads for the National Environmental Policy Act (NEPA) process.

## \* What's in it for Westchester County?

**Meeting the region's mobility needs is critical to serve growing demand, to achieve economic growth and to support our quality of life.** Each alternative being evaluated by the Project Team offers different potential benefits to the region, but all are focused on cross-corridor solutions that address traveler needs on both sides of the Hudson River, between Suffern and Port Chester.

During the first stage of the Tappan Zee Bridge/I-287 Environmental Review, the Alternatives Analysis, more than 150 suggestions on how to improve conditions in the I-287 Corridor were identified, studied and combined into 16 different scenarios that were analyzed for their environmental impact, constructability, cost and ability to improve mobility in the I-287 Corridor. The six alternatives that remained at the end of that screening process are now being studied in more detail in the Draft Environmental Impact Statement (DEIS) process.

**Each of the alternatives under study offers different potential benefits to Westchester County and the region:**

### TRAVELER BENEFITS

- + **Transit access** would be improved to employment centers in Westchester, Rockland and Orange counties as well as in Connecticut.
- + A **new cross-corridor transit link** would provide new transit connectivity among the New Haven, Harlem, Hudson, Pascack Valley and Port Jervis lines, as well as improved mobility in the corridor.
- + More **transit options** would be available along the I-287 Corridor for the growing commuter population, including that destined for Westchester County and Midtown Manhattan.

## SAFETY BENEFITS

- + **Breakdown lanes** on the bridge would improve mobility and safety.
- + Improvements to the bridge would meet current **seismic and design criteria**.
- + **Highway improvements** would provide a faster, safer and more reliable trip.

## ECONOMIC GROWTH BENEFITS

- + An **improved commuting environment** would make the Lower Hudson Valley more attractive to new employers – in Westchester, Rockland and Orange counties as well as in Connecticut.
- + A better commute would provide **greater access to a larger pool of workers** from throughout Westchester County and from Rockland and Orange counties.
- + Improved access would provide **greater mobility** for commuters and customers.

## QUALITY OF LIFE BENEFITS

- + **New transit stations** would offer the opportunity for transit-oriented development in Westchester County.
- + **New recreational opportunities** for Westchester County residents would be created by pedestrian and bicycle access on the bridge, with connections to pedestrian and bicycle trails on the west side of the river.
